

Policy Document for Environment and Energy Usage

Introduction:

The Institute understands that some of its activities may have some effect on the environment and has formulated an Environmental and Energy Policy to affirm the Institution's commitment to environmental and energy issues and to demonstrate its Intention to address those issues through continual Improvement in environmental practices.

The policy of the Tantia University is to "Ensure environment and energy compliance by incorporating sound environmental and energy management policies in the academic and administrative departments of the Institution."

Objectives of the policy:

- To ensure that the products purchased by the Tantia University for use in the campus are environment friendly and use less energy to reduce effect on the environment.
- To reduce the consumption of primary raw materials including fossil fuels, water and energy.
- To implement energy efficient, low carbon measures using recyclable components and renewables and improving the energy efficiency of lighting, power, heating, and ventilation systems.
- To promote long-term waste management and recycling procedures throughout the Institution by reducing overall waste production and using recyclable and recycled materials wherever possible.
- To conduct Energy and Environment audit on a regular basis by an approved agency.
- To protect natural habitats and provide an environment that is of benefit to staff, students, and the local community.
- Collaborate with appropriate local, national, and other agencies promote and raise awareness of good environmental management policies and practices among staff, students and other stakeholders across the Institution and to improve the understanding of environmental problems and their solutions.

Implementation of the policy:

The Tantia University has been making concerted efforts right from its inception to promote environment and energy conservation. It has established environmental goals, and the

Institute has made efforts to plant trees through NSS - NCC and has provided a lush green cover in the campus, The Tantia University has been conducting Energy audit and Environment audit with the help of certified agencies.

Training of faculty and students in Environmental and energy conservation through various awareness programmes in association with other organizations are being conducted regularly. Institute is committed to promoting eco-efficiency and innovation by participating in initiatives, ratings and indices relating to sustainability and the environment and thereby reducing environmental impacts in various activities of the Institution.
